year**

WE DELIVER POWER TO THE WORLD

**WHENEVER YOU NEED
POWER, WE ARE
ALWAYS WITH YOU...
SINCE 1994!**

Since 1994, Teksan has been delivering high quality tailormade solutions that are designed accordingly to your requirements with strong after-sales technical support and maintenance services anytime and anywhere you need uninterrupted power supply. When your company is moving further ahead rapidly on the road to success, you always feel our continuous support as your reliable power solutions partner.

Because Teksan is a member of your family...

IN TEKSAN “PEOPLE” COME FIRST...

Our vision is to become one of the world's leading energy suppliers without compromising from the philosophy “people come first”, the reliability and the quality of products by following up the standards and continuing our investments together with our competent and creative employees having adopted the importance of knowledge and technology.

Teksan, who aims to deliver uninterrupted power solutions to the people through sustainable improvement and innovation, designs and installs high quality diesel, natural and biogas driven generator sets, mobile lighting towers, portable generator sets, cogeneration-trigeneration solutions and hybrid power systems that exceed the expectations of the customers.

For more than 24 years, thanks to its solid experience and engineering know-how, Teksan has been providing tailormade power solutions that can efficiently operate even under the most challenging conditions for major international projects such as constructions, telecommunications, data centers, shopping centers, hotels, residential buildings, supermarkets, sport centers, mining facilities, hospitals, research centers, educational institutions and industrial plants all around the world.

Today, thanks to its high quality generator sets approved with international quality certifications which are made of world's top engine brands coupled to well know alternators to meet projects' requirements of different output ranges, and strong after-sales technical support and maintenance services in more than 130 countries, Teksan is always your reliable power solutions partner whenever and wherever you need.

MILESTONES OF SUCCESS...

1994	1995	1996	1997	1998	1999	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009	2010	2011
Established under the name "Deniz Mühendislik Ltd. Şti." and began its activities.						Increased its product range upper limit from 880 kVA to 2250 kVA.			Moved to Sancaktepe Plant. Power upper limit was increased from 2250 kVA to 3550 kVA.		R&D Department has been established. Produced the first national natural gas generator set of Turkey.		Developed the first domestic production cogeneration systems of Turkey.				
													Teksan carried out the most comprehensive ERP project of the industry.				
											With its special project with 2x3125 kVA - 11 kV alternators, Teksan produced the biggest generator sets in Turkey until today.						

2012

2013

2014

2015

2016

2017

2018

Realised the first trigeneration system project with 4x500 kW gas engine.

Teksan was named among the in TIM's "Top 1000 Exporters of Turkey" list.

Teksan Generator started Teksan Production System (TÜS).

Launched the power solutions that powered with biogas.

Increased the number of countries exported to 120.

Inoovated the first national Hybrid Power System in Turkey.

Chosen for the TUBITAK-TEYDEB Success Stories Booklet with the first domestic Hybrid Generator Set of Turkey.

Launched the first and only "Hybrid Lighting Tower" of Turkey to its product range.

Ranked 436th in TIM 1000 and ISO 500 lists.

Moved up to the 97th place in the list of 250 leading R&D companies of Turkey.

Kocaeli factory has started to operate.

Being recognised as a R&D Centre by the Ministry of Science, Industry and Technology, Teksan Generator has become the first private R&D centre in the industry.

Ranked Fortune 500 Turkey list from the 469th place.

Awarded the Authorized Economic Operator (AEO) Certificate.

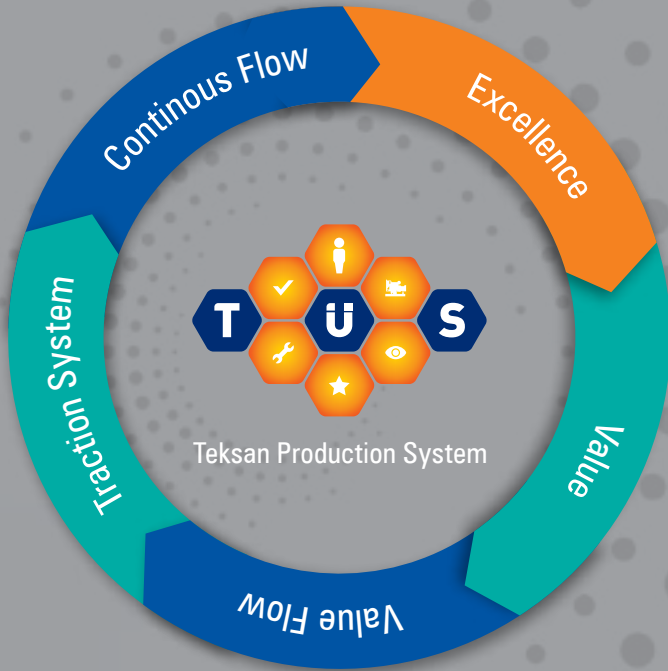

Has once again proved its quality and reliability by obtaining the UL Certificate.

Managed to enter the Turquality Brand Support Program.

Increased the number of countries exported to 130.

TEKSAN QUALITY IS NOT A COINCIDENCE!

Teksan Production System, which based on Lean Management philosophy, is whole of concept, system and techniques that have aim of the perfection in presented value by simplifying product and service creation process with offsetting wastage.

Teksan Production System aims to increase customer satisfaction and get adaptation flexibility to market conditions with increasing quality and making it sustainable, reduction of costs, making the deliveries timely.

QUALITY CERTIFICATES AND DOCUMENTS

Producing high quality solutions with proper price that meet continuously-changing customer needs beyond expectations and delivering timely solutions are the most important objectives of Teksan's Quality Policy." In line with this aim, Teksan, which carries out all its activities with international standards, as well as Teksan Production System, Quality Management System, Environmental Management, Occupational Health and Safety system are established by Teksan, has lots of international certificates and documents as 2000/14/EC Noise Emission Certificate, ISO 9001, ISO 140001, SONCAP Product Certificate, OHSAS 18001, CE Certificate, GOST-R Certificate, TSE Service Competency Certificate and Turkish Standard Compliance Certificates, takes part among most reliable and most preferable companies of sector in power solutions with providing uninterruptedly pre-sales and after sales technical support.

TEKSAN'S HIGH STANDARDS!

THERMAL ANALYSIS

FINITE ELEMENTS ANALYSIS

- Static Analysis,
- Dynamic Analysis,
- Natural Frequency Analysis,
- Fatigue Analysis,
- Nonlinear Analysis.

TESTS

- Voltage Measurement, Implementations
- Vibration Test,
- Acoustic Test,
- Temperature Test,
- Performance Test.

COMPUTATIONAL FLUID DYNAMICS

- Cabin Flow Optimization,
- Exhaust muffler Back Pressure Analysis.

ELECTRICAL TESTS

- Insulation Test,
- Working scenarios simulation,
- Harmonic Measurement,
- Temperature control.

S I L E N C E

LISTEN VERY CAREFULLY!

**THANKS TO
ULTRA SILENT CANOPIES,
NOT ONLY YOUR GENSETS
BUT ALSO YOUR EARS
ARE PROTECTED!**

STANDARD TYPE CANOPY

HIGH PROTECTION AGAINST CORROSION AND RUST

MAKING DIFFERENCE IN PERFORMANCE IN TERMS OF SOUND INSULATION

DESIGN WITH MAKING TRANSPORTATION AND MAINTENANCE EASIER

SAFE USAGE

- Compatible with 2000/14/EC directives, certified noise emission level,
- 2 or 4 points transport possibility according to cabin size,
- Hidden exhaust inside the canopy,
- Emergency stop button located on the canopy,
- Improved air suction channel to ensure homogenous cooling in the canopy,
- Radiator air outlet and exhaust with designed towards above,
- Lid on cab that provides to be filled up water and antifreeze easily to the radiator,
- Amplified paint system against corrosion and rusting,
- Improved performance in terms of sound insulation,
- Demounted parts that make transportation and maintenance easier,
- In accordance with customer requests, private canopy production with desired sound level/size.

LIGHTING TOWERS

Lighting Towers, which are ideal for enlightening of construction sites, concrete works, road-bridge production works and outdoor organizations that are in open area and their usage places replace frequently, can also be produced with private sound level in accordance with customer requests.

ALL CONTROL IS IN YOUR HANDS

YOUR ENERGY IS UNDER "CONTROL"

S

tandard control panels, that are used in Teksan sets, provide comfort and confidence in usage with all required indicators. Special control panels, that can satisfy all needs, are designed in accordance with requests of our customers.

AUTOMATIC CONTROL PANEL

Automatic Control Panel is designed according to generator groups that are used as back up of mains. It steps in automatically when mains electricity is cut and transfers the electricity that obtains from generator set to the system. In case of return of mains power, automatic control panel transfers the load to the mains and halts generator automatically. It has electronic control unit with protection and control specific and micro processor for working of engine and alternator group healthfully. As well as this unit gives a possibility to conn automatic-manuel-test at inert-test at load position, it also includes measurement equipments for visual control.

MANUEL CONTROL PANEL

Manuel Control Panel is designed for generator groups which are desired to connect manually. Especially, it is preferred in the absence of mains electricity power. Manuel control panel provides taking of protection precautions, monitoring and implementing of control operations. Micro processor electrical control module provides protection precautions.

EXTENSIVE OPTIONS FOR MORE POWER...

T

hanks to its engineers, that are experts in their subjects, Teksan offers you much more than a generator by Putting your needs in the first place.

WHAT DOES TEKSAN SYNCHRONIZATION PROJECT PROVIDE YOU?

COMPOSES
ADVANTAGE OF

SETUP COSTS

GIVES HIGH TEST
POSSIBILITY WITHOUT
CUTTING ENERGY
OF SYSTEM

SUPPORTS
THE MAINS

S

ynchronization is to mount the same common busbar after the comparison of two or more generators groups' voltage frequency value's phase alignments and angles. Synchronous groups meet current load by sharing in ratio of their forces and work or stop automatically according to load alteration.

Thus, synchronous groups provide economic advantages and security. With purchasing single group generator by identifying initial need, establishment's initial investment cost can be decreased and important savings in fuel consumption can be provided. Synchronized generator provides remote control possibility to all functions by communicating with components as PLC computer, network, modem. Thanks to synchronized generator transmits informations to automatisaion systems, economy and security reach to high level.

Standard Equipments for Generator Sets

Engine

In Teksan generator sets, leading engine brands that have state of the art technology and have compliance with ISO 8528, ISO 3046, BS 5514, DIN 6271 standarts, are being used. These engines with low fuel consumption, provide accurate speed setting and order, mount to the fuel pump, also have mechanic or electronic type governors.

Alternator

In Teksan generator sets, leading alternator brands of the world that have state of the art technology, high quality, productivity and durability, are being used. All alternators, which pass necessary test process and found appropriate according to EC 60034-1; CEI EN 60034-1; BS 4999-5000; VDE 0530, NF 51- 100,111; OVE M-10, NEMA MG 1.22. standarts, have bearing system that does not need maintenance, with electronic type voltage regulator providing voltage setting.

Control Panel

Standard control panel, that is used in Teksan generator sets, ensures comfortable and safe usage. All measured and statistical parameters, operating modes, notice and alarms and condition of generator, are monitored easily from the control panel. On the front of the panel's metal body has electronic control module and the emergency stop button and the panel's metal body is made of steel sheet and is painted with electrostatic powder paint. Teksan offers panel design and solutions that comply with special requirements of customers as well as quality standard panels.

Chassis and Fuel Tank

Chassis is manufactured from steel that has features and durability for carrying burden of generator set. Thanks to its rigid structural design and anti-vibration mounts, it reduces vibration level to minimum. All chassis contain lifting lugs. Apart from chassises that are produce by Teksan, special solutions that design in accordance with customer desires, make transportation and positioning easier. In less than 1600 kVA power generator sets, fuel tank is produced integratedly to the chassis. In more than 1600 kVA power generator sets, rectangular type fuel tank is provided with generator set seperately. In all types of fuel tank have its level and indicator.

Cooling System

System, that consists of quality industrial-type radiator, expansion tank and cooler fan, keeps the temprature of generator set's equipments constant at a proper level.

WE PREFER
HIGH QUALITY
PRODUCTS OF THE WORLD'S
MOST RESPECTFUL
ALTERNATOR
MANUFACTURERS.

Some Optional Equipments for Generator Sets

- Medium voltage alternator,
- Remote radiator applications,
- Automatic fuel filling system,
- Fuel tank, oil pan, dashboard, alternator, coil heaters,
- Alternator with double AVR and PMG,
- Synchronization systems,
- The generator output breaker,
- Grid-generator transfer switches,
- Accordance with the specific volume of demand-insulated cabins,
- Seismic solutions,
- Trailer,
- Remote monitoring.

COGENERATION POWER PACKS

STRONG SOLUTIONS FOR FUTURE

TEKSAN, thanks to its solid experience and know-how, delivers high performing natural gas and biogas-based cogeneration-trigeneration solutions with energy efficiency up to 90%. You can get your investment back in a short period of 2-3 years.

C

ogeneration is to obtain energy more than one form from fuel.

In Cogeneration, the basic principle is to benefit accumulated heat in the system

to provide saving by considering the electricity needs of the facilities.

In cogeneration systems, at the result of energy local production energy productivity is increased by providing electricity and temperature needs. And consequently, emission levels are gotten under control and carbon footprint is decreased.

Moreover, decreasing energy costs increase the profitability of the plant and nowadays, an advantage in competitive conditions that become more difficult is provided.

According to electrical and thermal load trends, in applications the co-operation of multiple sets can be provided and cogeneration systems work under maximum load, energy production in the highest efficiency and lowest cost can be established.

Advantages of Teksan Cogeneration Systems:

- Durable to work for many years, design that make it's dynamic and static analysis and calculations
- High efficiency due to it's equipment designed specially for cogeneration system
- Convenience in layout and maintenance course due to it's compact design,
- Investment return in short time thanks to feasibility calculations accurate analysis and suitable system design,
- Ease of augmentation of system capacity upon demand and simultaneous operation with diesel generators
- Low maintenance costs,
- In Teksan cogeneration systems, heat can be offered to the client in various ways. Along with standard hot air outlet, project based superheated steam and hot oil, cold water can be distributed too, in such projects which need cooling, via absorption chillers. Along with these, in greenhouses and projects that are demanding CO₂ usage, exhaust emissions are also utilisable.

Turbo Charger

Manifold Heat Insulation

Temperature and Pressure Gauges

Jacket Heat Exchanger

Jacket Water Pump

TRIGENERATION POWER PACKS

T

rigeneration is the process of procuring cooling in addition to the electrical and heat outlets of cogeneration systems. In trigeneration systems, hot water or exhaust, exhaust, that are gathered from the engine, are being used to obtain cold water via absorption chillers.

The trigeneration system is recommended in such implementations when the heat demand is used seasonally or in such implementations where cooling demand is higher than that of heating demand.

Sole or double effect absorption can be recommended depending on the cooling demand. In system absorption chillers provide cycle efficiency between 0,7 - 1,4 COP, depending on it's working principles.

In Teksan Trigeneration Systems, in addition to the cogeneration packs; absorption chiller, cooling tower and cooling pumps are also presented to the client.

HYBRID POWER SYSTEMS

Teksan Hybrid system is a complete electrical power supply solution that can be easily configured to meet a broad range of power needs.

Optimum Energy Solution

- Special system design gives the flexibility of adding renewable power sources to the system at any time.
- All-in-one design with possible lowest footprint saves significant space
- High tech battery system that is specially engineered for Hybrid power generators ensures the longest and most cost efficient service life.
- Highest charge efficiency and shorter charge time are achieved with unique charging method and latest battery technology

Green Energy

- Lower fuel consumption by 65%,
- Reduces CO₂ emission,
- Reduces noise,
- Lower heat emissions.

Wide Spectrum of Tailormade Solutions

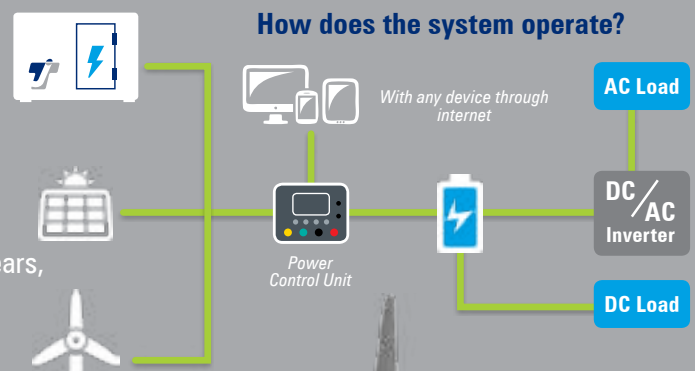

- Thanks to our engineering know-how, tailormade Project experience, high quality components with contemporary technologies, we deliver high efficiency and sound solutions that matches with the specific needs of your projects.

Significant Advantage in OPEX

- Lower generator operating time up to 80%,
- Longer service intervals and fewer technical personnel allocation,
- Lower fuel consumption up to 65%,
- Reduces pay back period of the investment down to 1,5 years,
- Increases utilization period of the sytem.

Remote Monitoring and Management System

- It is very handy and cost effective to monitor the performance of operation and to interfere the system in case of need from far distances with Remote Monitoring and Management System supported with GSM and internet technologies,
- You do not have to wait until your technical teams' attainment to the site,
- The risk of losing money due to interrupted services minimized because of the lower lag time in physical technical intervention.

THE PRODUCT RANGE

PORTABLE GENERATOR SETS

TEKSAN*mini*

DO NOT UNDERESTIMATE IT!

Teksan Mini portable generator sets, thanks to high-tech engines they have, take little room but provide high performance.

Teksan Mini generator sets provide the power you need with maximum efficiency. Thanks to their compact and durable designs, high performance with low fuel consumption and different power output options, Teksan Mini products deliver more than you expect.

CONTINUOUS SUPPORT

T

eksan provides technical support services to its customers through a widespread distribution network.

- Free place and power detection,
- Assembly-disassembly,
- Periodic maintenance,
- Alteration,
- Technical support and advice,
- General maintenance,
- Emergency calls,
- Revision,
- Commissioning,
- Reparation.

POWER AND PLACE DETECTION

One of the strongest sides of our Technical Service Team is to provide pre-exploration studies for determining energy needs, project designs, purchasing and engineering services including appropriate location selection for the generator sets.

PERIODIC MAINTENANCE

With the commissioning of generator sets, in the frame of 'General Maintenance Schedule' determined by manufacturer making the checks and maintenance of generator sets, need to change consumables. It is proportional to the run time of the generator with the obligation to make periodic maintenance.

WHY DO YOU NEED

'PERIODIC MAINTENANCE' CONTRACT?

- Generator sets work long lasting and efficiently,
- The financial and time losses sourced from the company or from the generator are prevented,
- That provides advantage in planning of spare parts,
- Fast and prime services are offered,
- User-source errors are minimized.

WE ARE AT YOUR SERVICE

GUARANTEE

Teksan products are guaranteed for 30 months after the shipment and 2 years or 1000 hours of operation whichever comes first after the first start up against installation and manufacturing defects. Certificate Of Warranty is delivered with generator sets and guarantee process is initiated. Product informations and serial numbers are found in the generator identification label that is on the generator sets.

SPARE PARTS

For providing better service of generator sets, original spare parts, that are recommended by 'Technical Services Team', should be used. Teksan is providing the best service for meeting needs with sufficient stock level for spare parts.

TRAINING

Teksan Service Center is offering technical training support to all companies within Teksan Academy. Teksan can organize and conduct the essential trainings upon the request of the partner company with “beginner” or “advanced” content in accordance with the profile of the participants.

INFINITE POWER SUPPLY TO ENTERPRISES

POWERFUL TEAM THAT CARRIES OUT SUCCESSFUL PROJECTS!

R&D and Project departments of Teksan are moving together for producing optimal solutions that meet your wishes and needs. They are taking unique results from projects that they developed special for you.

SYSTEMS

Teksan, which has accumulated extensive knowledge and experienced expert engineer staff, has succeeded in system integration projects with different specifications and has reached the preferred brand in the international arena in special projects.

Our Project Development Process

- Making the technical analysis of the project specifications,
- Making field and customer visits before and after sales for offering best solution to customer,
- Designing generator sets appropriate with technical parameters as voltage, frequency, altitude, temperature,
- Choosing special equipment for special projects,
- Carrying out of production appropriate with predetermined specification standart and schedule,
- Giving the required education to sales teams, distributors and end users for projects.

Special Practices

- Product designs at size, power and noise levels that can depend on customer demands,
- Special fuel tank productions,
- Remote radiator practices,
- Special mobile generator sets,
- Seismic solutions,
- Special paint applications.
